Description:

LGU Ozamiz is one of the beneficiaries of the DOST FNRI Funded project "Roll-out of Complementary Food Production in the Regions (Batch 2)". The project involves transfer of complementary food technologies through provision of equipment, technical trainings and other assistance to the selected beneficiary. The counterpart of the Local Government is the complementary food processing area. The City Government of Ozamiz is regularly conducting feeding program to its 51 baranggays through the city nutrition office. For 2014, a total of 702 identified malnourished children aged 6-72 months are recipient of this program on a regular basis. Complementary food blends are being outsourced from their yearly allotment amounting to about half a million pesos. With the project, the city looked forward to producing their own. This will not only assure them of steady supply of nutritious complementary food blends but will also cater to other malnourished children in Misamis Occidental. The City Government of Ozamiz hope to be the provider of complementary food products in the province.
